**BOSCH**

Bosch Intrusion Firmware / Software

You can find the latest version of the Solution 2000/3000 attached at the bottom of this article, or on the Keenfinity product page under the 'Downloads' section. You can also use these links to download future firmware / software updates from the Keenfinity website.

[KEENFINITY Group | Solution 2000 / 3000 Control Panel | Control panel, 16-zone | ICP-SOL3-P](#)

The same firmware update process applies using the IUI-SOL-ADAPTER, however for this update we also recommend the use of the new 'migrate' function through A-Link+. New locations and features added in the update may not populate to their correct default values if the migrate function, or a panel default, isn't performed. The article linked below has more information on updating to the latest version of A-Link+.

Bosch Intrusion Firmware / Software

A-Link+ Migrate

- The migrate function copies an existing panel profile to the latest firmware, and populates new locations to their correct default values.
- From the customer selection screen, right click the profile you want to migrate and select '**Migrate Configuration to Latest FW**'. This will create another customer profile with the same programming on the latest firmware version. Ensure the profile you migrate is up-to-date with what's currently programmed on the panel.
- Once you've updated the panel, connect using the new profile and select 'Send A-Link+ Data to Panel'.
